

COURSE OVERVIEW DE0751 Wireline Operations & Techniques (Slickline & E-Wireline)

Course Title

Wireline Operations & Techniques (Slickline & E-Wireline)

Course Reference

DE0751

Course Duration/Credits

3.0 CEUs (30 PDHs) Five days/3.0 CEUs/30 PDHs

Course Date/Venue

Session(s)	Date	Venue
1	May 12-16, 2024	Oryx Meeting Room, Doubletree By Hilton Doha- Al Sadd, Doha, Qatar
2	August 25-29, 2024	Kizkulesi, Crown Plaza Istanbul Asia Hotels & Convention Center, Istanbul, Turkey
3	December 08-12, 2024	The Kooh Al Noor Meeting Room, The H Dubai Hotel, Sheikh Zayed Rd - Trade Centre, Dubai, UAE

AWAR

Course Description

This practical and highly-interactive course includes real-life case studies and exercises where participants will be engaged in a series of interactive small groups and class workshops.

Many of today's most vital oilfield operations depend directly on the use of wireline. Wireline is particularly important during completion and production. Field operators can run anything from a basic downhole directional survey to the most delicate gamma ray formation log on wireline. They can fire perforating charges at precisely determined downhole locations, back off a string of stuck pipe, retrieve a wrench, or manipulate complex subsurface well pressure and flow controls.

Wireline operations can be done inside the tubing without killing the well, by means of a lubricator connected to the wellhead. Operations can be carried out under pressure and even without stopping production. Further, wireline operations are performed quickly due to the use of lightweight, highly mobile equipment and run by two or three specialized operators. As a result, wireline operations can be readily implemented at relatively low cost.

DE0751 - Page 1 of 9 DE0751-05-24|Rev.48|04 March 2024

Wireline technology has been modernized steadily, along with significant improvements in wireline capability. During the past decades, Wireline Formation Testing has emerged as one of the critical formation evaluation means in the upstream hydrocarbon exploration activities. The wireline formation test is a quick, inexpensive means of measuring pressures at precise depths in the wellbore. Wireline tests are performed mostly in open hole using a cable-operated formation tester and sampling tool anchored at depth while reservoir communication is established through one or more pressure and sampling probes.

This comprehensive and up-to-date course covers the development of wireline operations and techniques. It describes wireline equipment in details and discusses the various operations performed using such equipment including diagnostic, troubleshooting, completion and production maintenance. Further, the course covers the openhole wireline testing, the wireline sampling techniques and the drawdown & buildup mobilities from wireline testers. The course ends up with a useful demonstration of the various wireline test interpretation software.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply an up-to-date knowledge on wireline equipment, techniques and operations during well completion, servicing, workover and production
- Identify different types of packers and methods of conveyance, ISO & API standards, packer rating envelopes and flow control accessories, cased hole applications and multilateral completions (TAML levels)
- Discuss the impact of length and force changes to the tubing strings, perforating methods & perforating design,
- Describe perforating equipment & operations and the method of setting a plug or packer
- Employ fishing operations and logging with CT (stiff wireline)
- Explain the planning, logistical constraints, selection of equipment, monitoring and recording equipment, considerations and safety issues of mechanically removing scale, cutting tubulars, operating sliding sleeves and running a completion with CT

Exclusive Smart Training Kit - H-STK[®]

Participants of this course will receive the exclusive "Haward Smart Training Kit" (**H-STK**[®]). The **H-STK**[®] consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.

Who Should Attend

This course is essential for field operational and technical staff such as engineers, supervisors, foremen, technicians and operators who are in charge of wireline operations and for other personnel who have frequent interfaces with wireline operations. This is also beneficial for production engineer, wireline supervisor, district engineer, drilling engineer and operation engineer.

DE0751 - Page 2 of 9

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations: -

The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

*** *B

BAC British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly.

Mr. Mohamed El-Sayed is a Senior Petroleum & Production Engineer and Well Service Consultant with over 35 years of extensive experience in Drilling/Reservoir/Petroleum Engineering and Well Service Operations within the Oil and Gas industries. He is a recognized authority in "Hands On" Service and Drilling Operations and Well Completions (Riggless Operations). Further, his expertise covers the areas of wellhead operations, Wellbore

Interventions, Well Testing, Wire/Slickilne Equipment and Operations, Coil Tubing, Water Flooding, Electric Submersible Pumps (ESPs), SMART well completion technology, X-mas trees, well intervention, well control, wireline, slickline & fishing operations, well completion & workover, coiled tubing technology and pipeline pigging. He is as well recognized & respected for his process, procedural expertise, modus operandi as well. He is currently working as the Well Intervention Division Manager of GUPCO.

Mr. Mohamed has handled various positions during the past three decades in his career. He worked in production, drilling, workover, complex wellbore interventions in both drilling & servicing and wellhead operations where he served as an important engineer and manager in these areas. He has indeed exhibited sheer diligence in his field. He was in-charge of setting subsurface safety valves and in troubleshooting and testing all types of valves tubing and wireline retrievable SSSV for renowned companies such as Halliburton, Schlumberger, Baker Hughes and Weatherford. He has also worked and evaluated the advanced measuring system in one of PDO's oil fields thru Halliburton. Further, he has very good experience in the set-up and commissioning, maintenance & troubleshooting of wireline equipment. As Wellhead and Wireline Manager, he was primarily responsible of planning the wellhead and wireline daily activities and spearheaded the solving of problems encountered during daily operations. This also covered the installation, operation, troubleshooting and testing of the wellheads and the supervision of electric line operations and coiled tubing jobs.

Mr. Mohamed has participated in various hydrocarbon and production engineering conferences and **presented papers** on **multilateral wells** for the **Society of Petroleum Engineers** (SPE) and has taken specialized trainings on production technology, safety management, gas lift design, wireline and **wellhead operations** with **Schlumberger**, **Halliburton** and **AMA** in the **USA**.

Mr. Mohamed has a **Bachelor's** degree in **Petroleum Engineering** and is also a well-regarded member of the Society of Petroleum Engineers (**SPE**). Further, he is a **Certified Instructor/Trainer**.

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-ofthe-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

Doha	US\$ 8,500 per Delegate. This rate includes H-STK [®] (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Istanbul	US\$ 8,500 per Delegate + VAT . This rate includes Participants Pack (Folder, Manual, Hand-outs, etc.), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Dubai	US\$ 8,000 per Delegate + VAT . This rate includes H-STK [®] (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1	
0730 – 0800	Registration & Coffee
0800 - 0815	Welcome & Introduction
0815 - 0830	PRE-TEST
	Packers & Methods of Conveyance
	Retrievable Tension/Compression Set-Versatile Landing • Retrievable
0830 - 0930	Hydraulic-Set single-String Packer • Dual-String Packers • Permanent and
	Retrievable Sealbore Packers • Landing Conditions • Through-Tubing
	Operations • Casing Clean-up Operations • Other Casing Consideration
0930 - 0945	Break
	ISO and API Standards
0945 – 1100	Grade V6 Supplier/Manufacturer Defined • Grade V5 Liquid Test • Grade
	V4 Liquid Test + Axial Loads • Grade V3 Liquid Test = Axial Loads +
	Temperature Cycling • Grade V2 Gas Test + Axial Loads • Garde V1 Gas
	Test + Axial Loads + Temperature Cycling • Special Grade V0 Gas Test +
	Axial Loads + Temperature Cycling + Bubble Tight Gas Seal
